

Creating an S3 Bucket

Steps to be followed:

1. Creating an S3 bucket from the AWS Management Console

Step 1: Creating an S3 bucket from the AWS Management Console

- 1.1 Go to the AWS Management Console
- 1.2 Search for **S3** in the search bar
- 1.3 In the S3 Management Console, click on the **Create Bucket** button
- 1.4 Enter the **Bucket name**, and the **Region** in the **Create bucket** window, and click **Next**
- 1.5 On the **Configure options** page, select various configuration settings, and click **Next**
- 1.6 On the **Set permissions** page, keep the permissions set to default for the **Block public access** (bucket settings), and click **Next**

- 1.7 On the **Review** page, review the bucket settings, and click on the **Create bucket** button
- 1.8 Go to the S3 dashboard to see the newly created bucket
